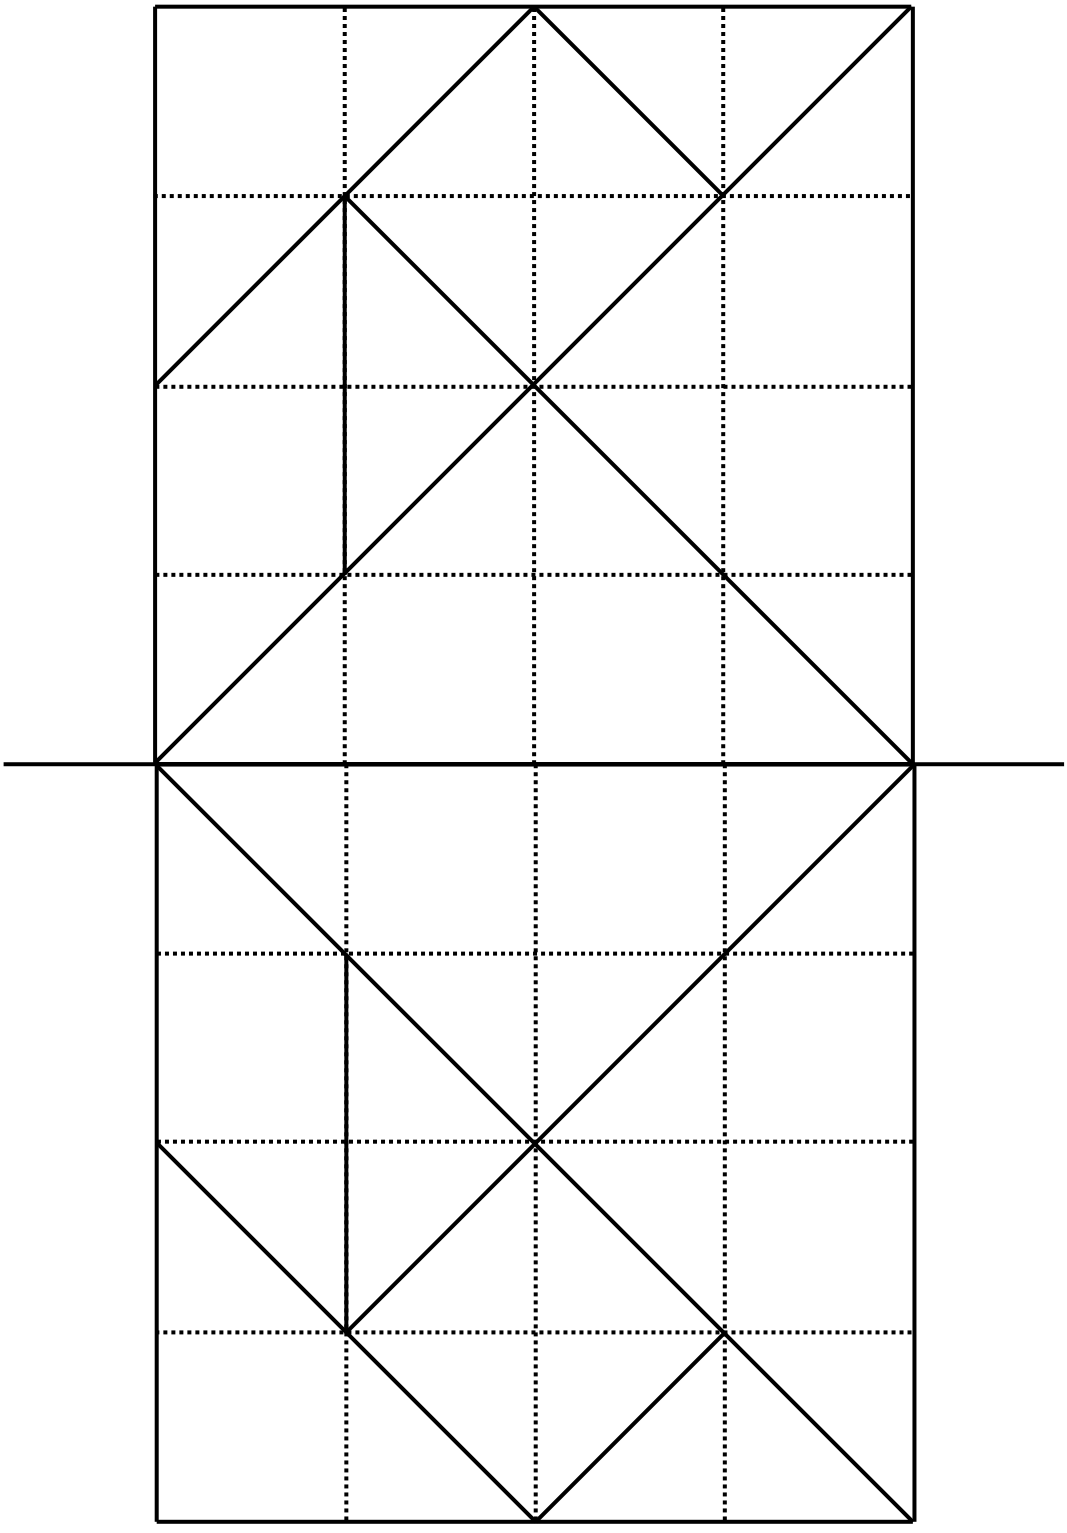
13 - Un Tangram à découper et coller afin que les deux faces des pièces soient quadrillées.

Ce document présente des solutions aux recouvrements de triangles et de quadrilatères proposés dans un autre document déposé dans ce dossier. Il est un complément à ce qui est proposé dans le stand n°13 de notre exposition régionale.

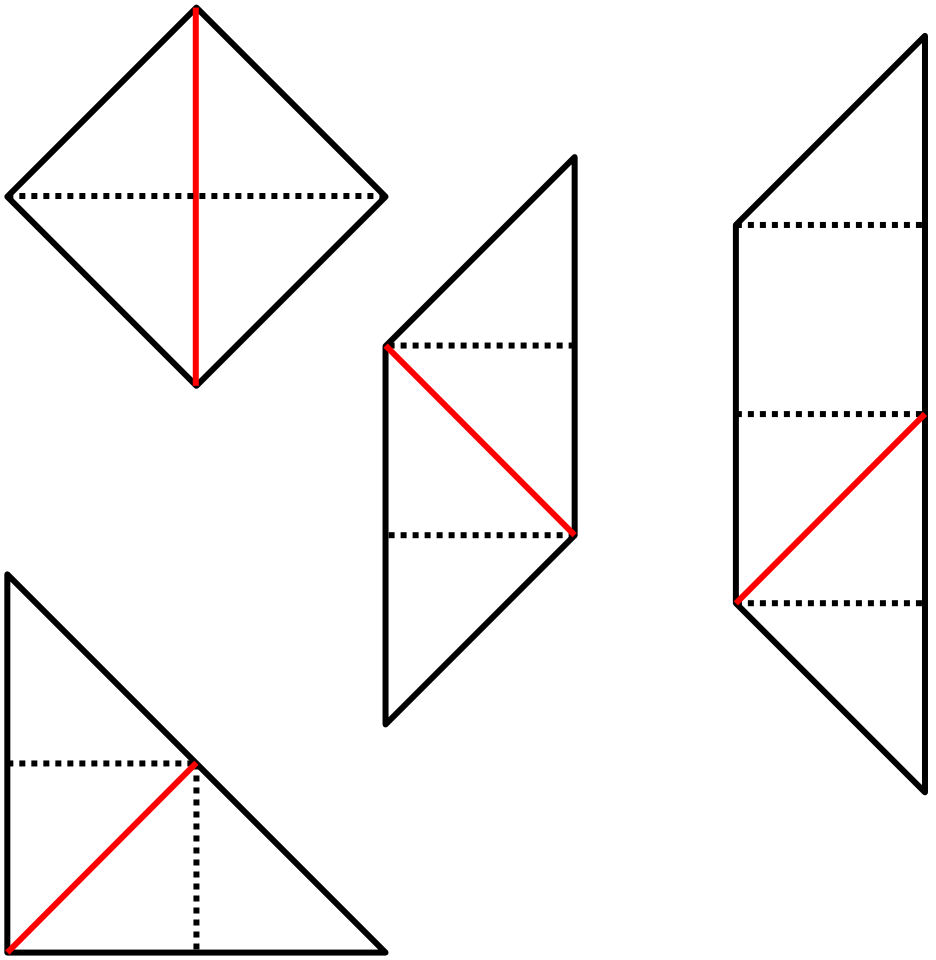


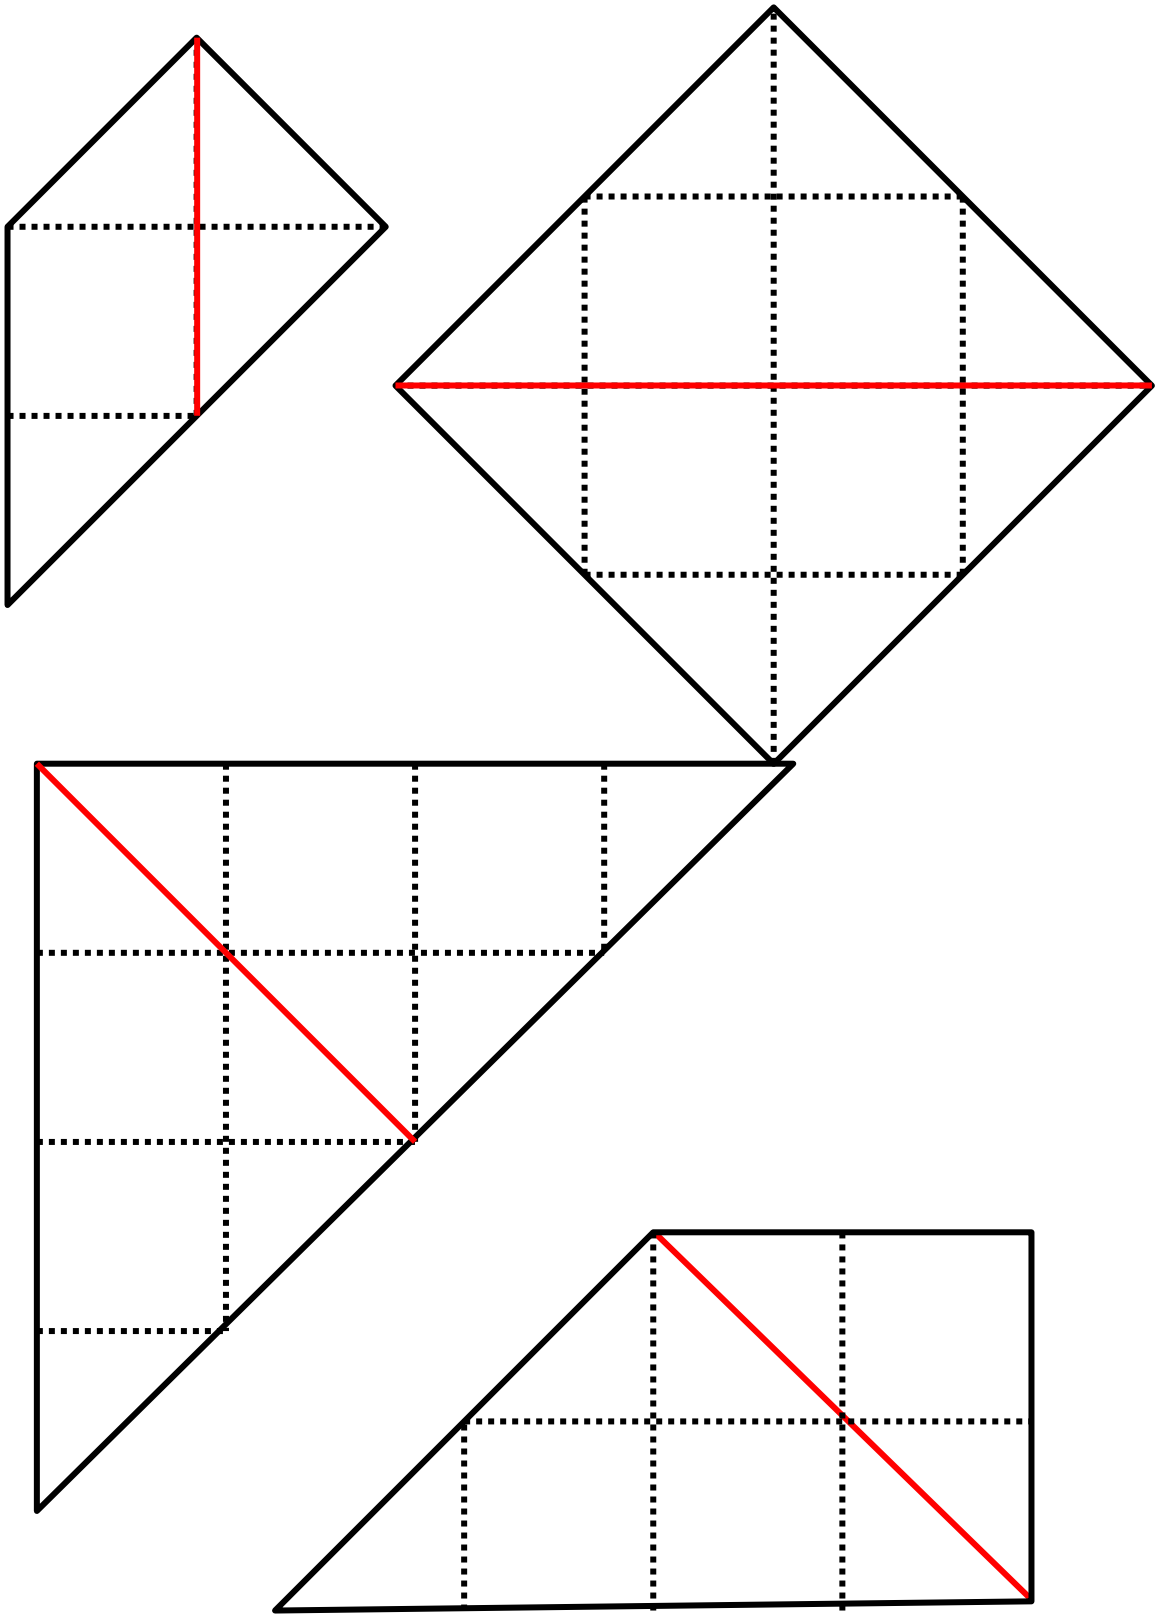
13- Des triangles et des quadrilatères faits avec des pièces du Tangram

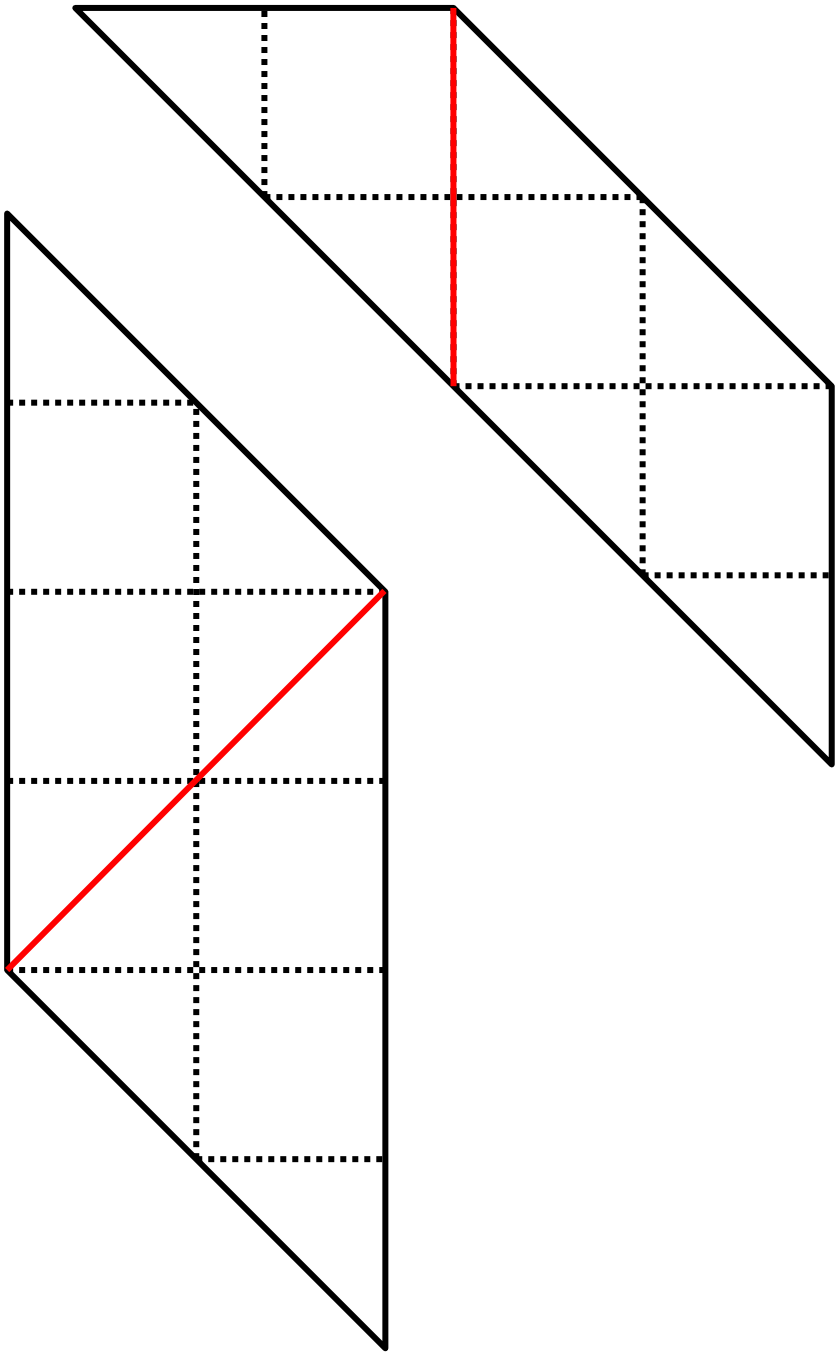
En manipulant deux, trois, quatre, cinq, six ou sept pièces du Tangram, nous obtenons des triangles et des quadrilatères. La collection n'est sans doute pas exhaustive et les solutions dessinées ne sont pas toujours uniques…

Le quadrillage des dessins est le même que le quadrillage des pièces du puzzle proposé page précédente.

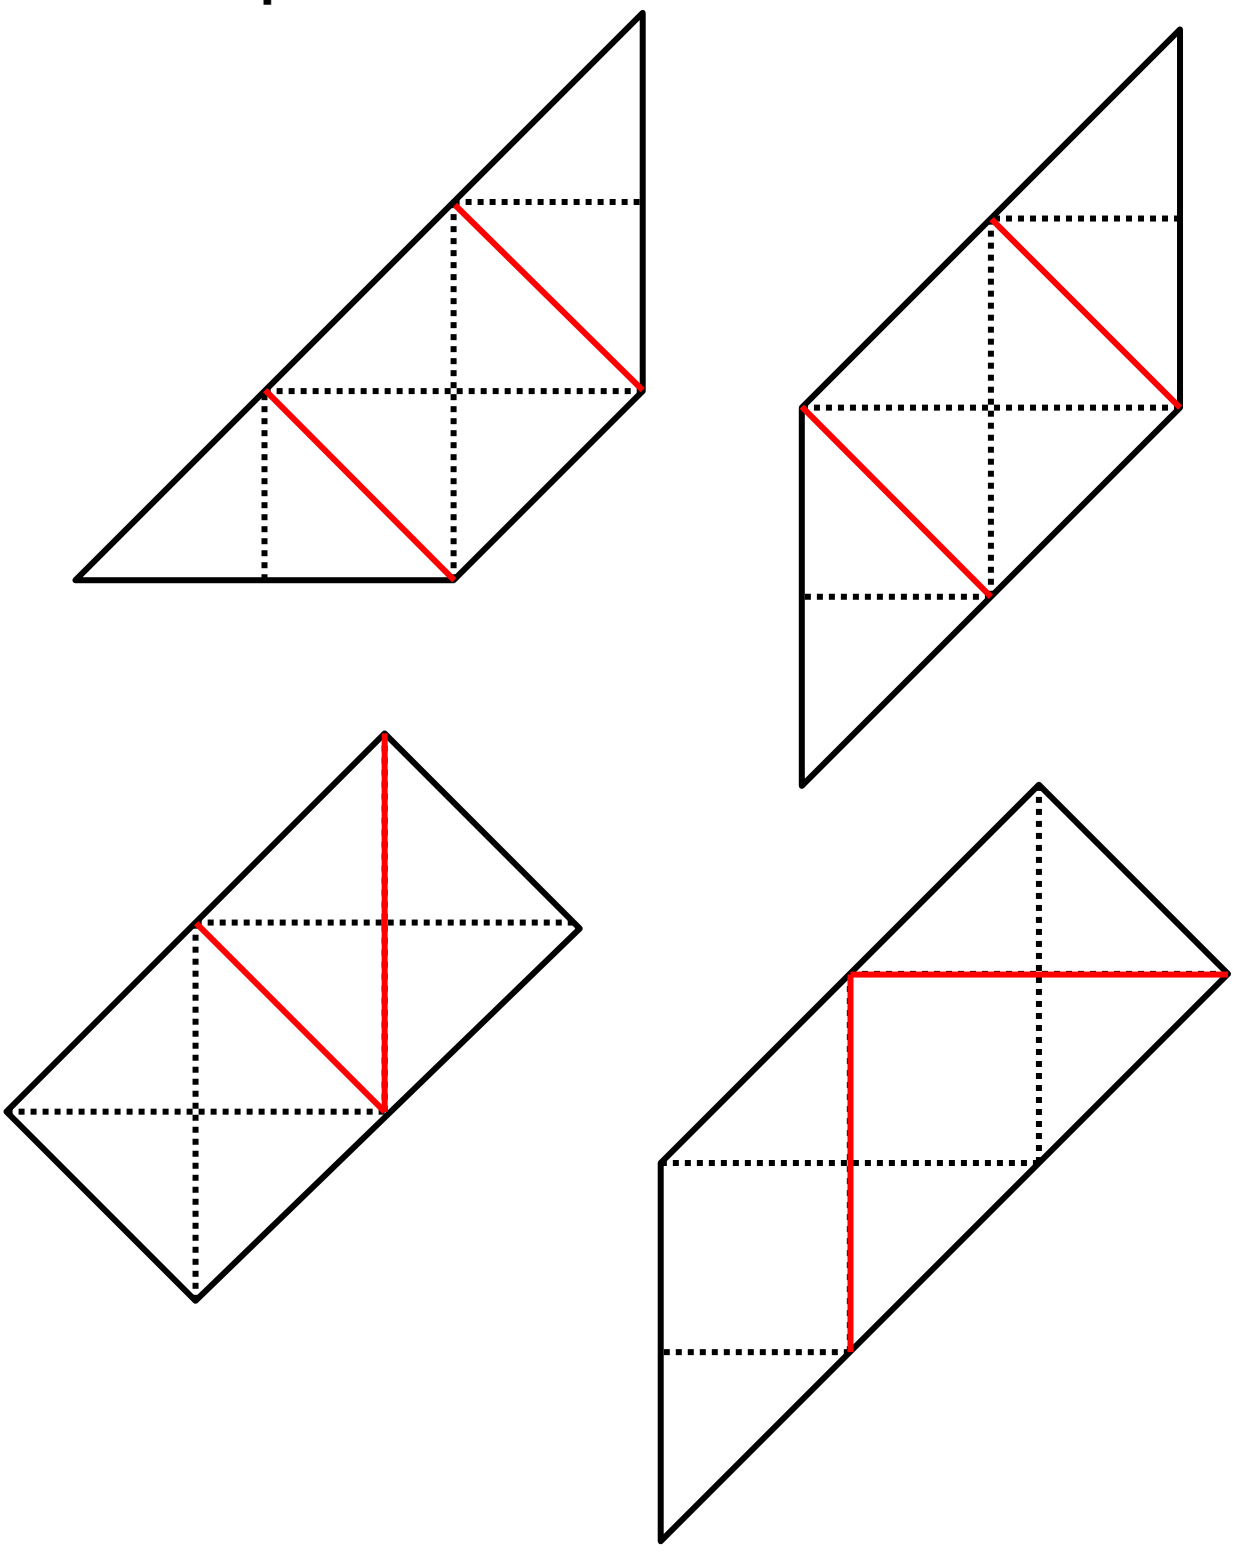
Avec deux pièces

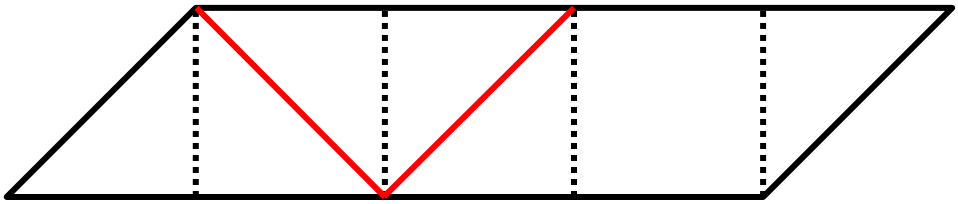


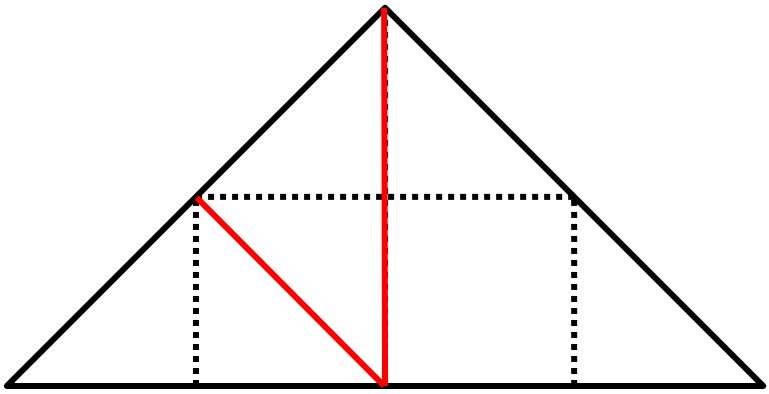




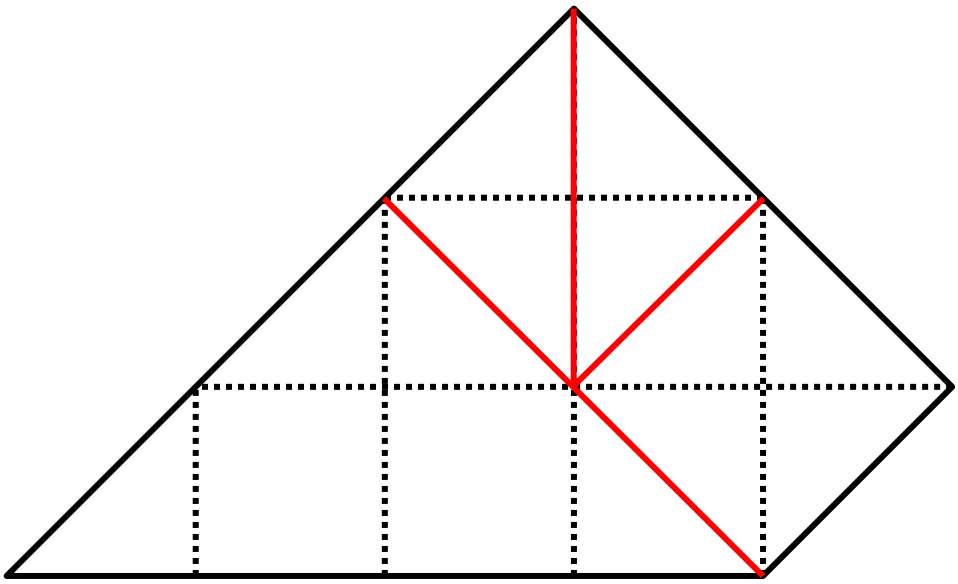
Avec trois pièces

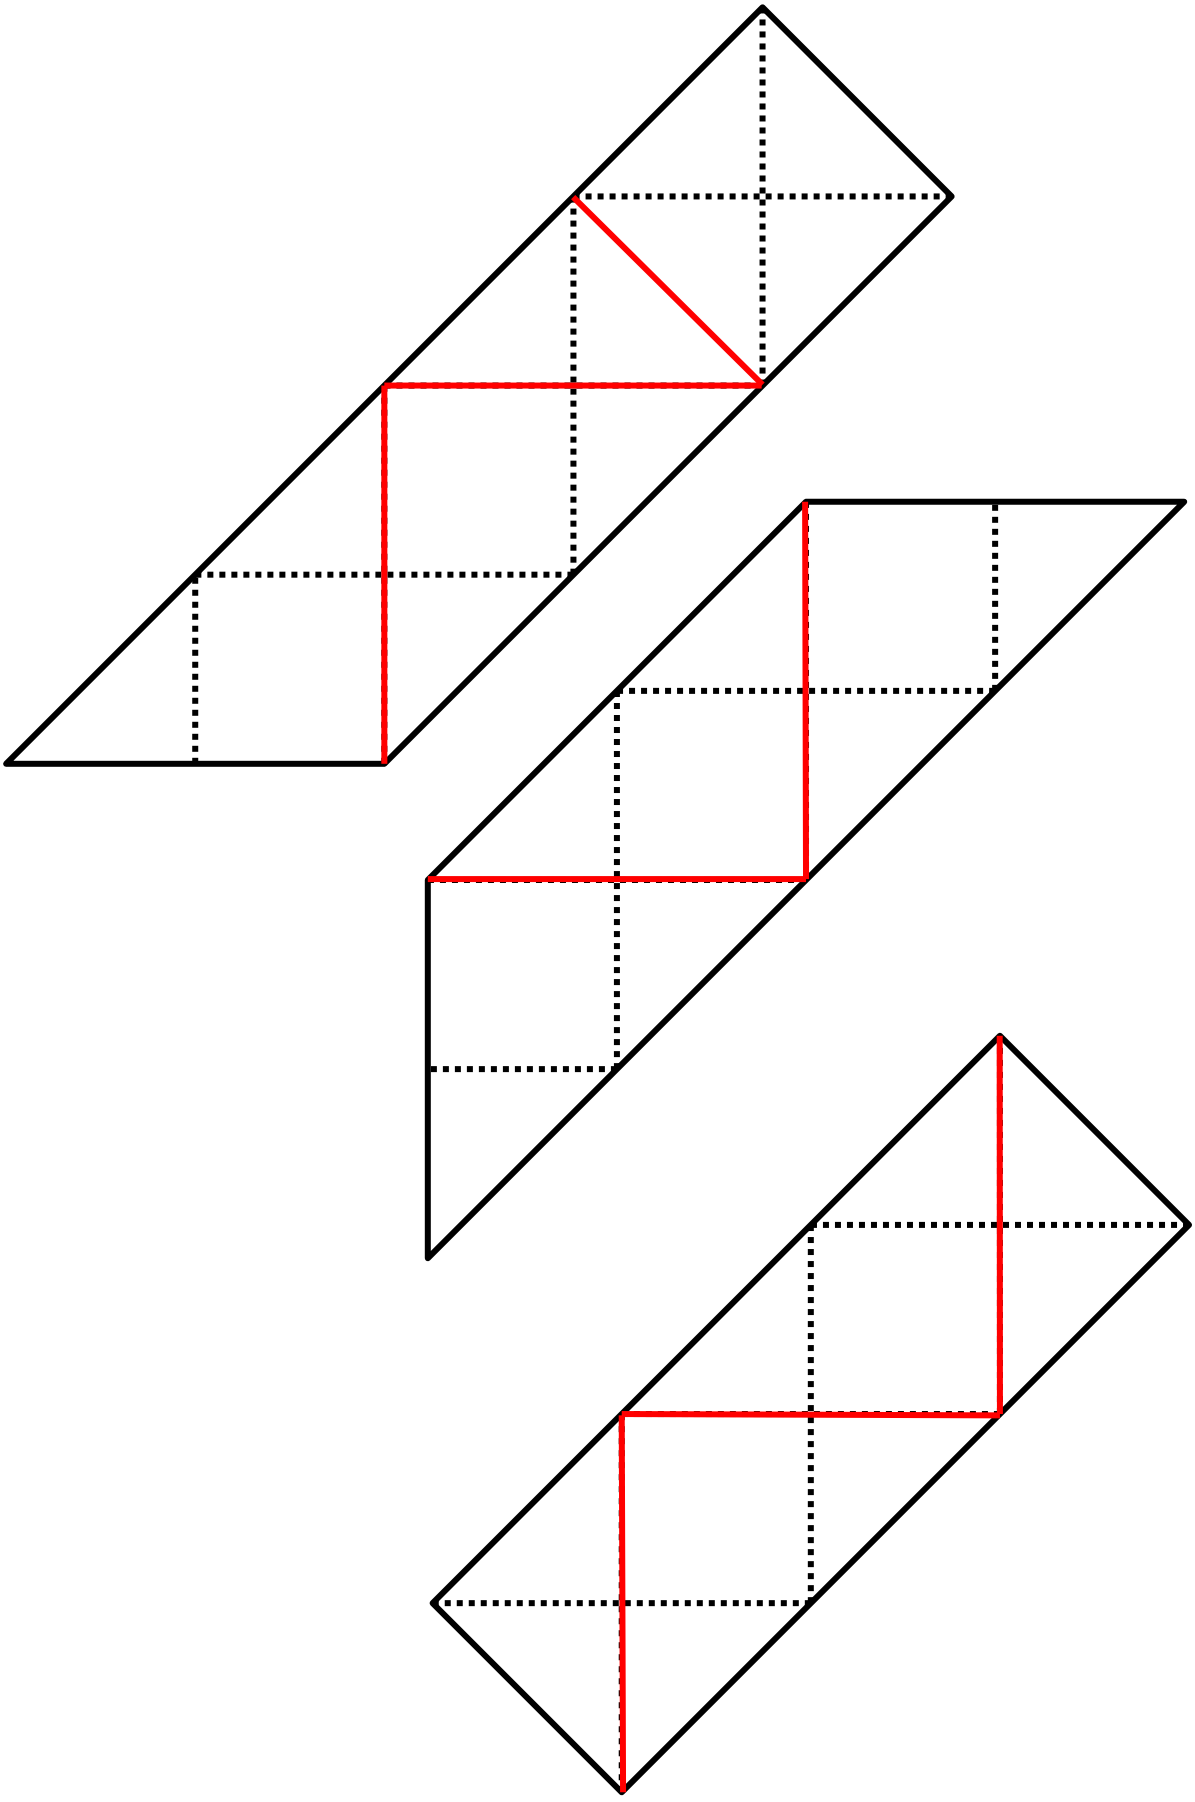


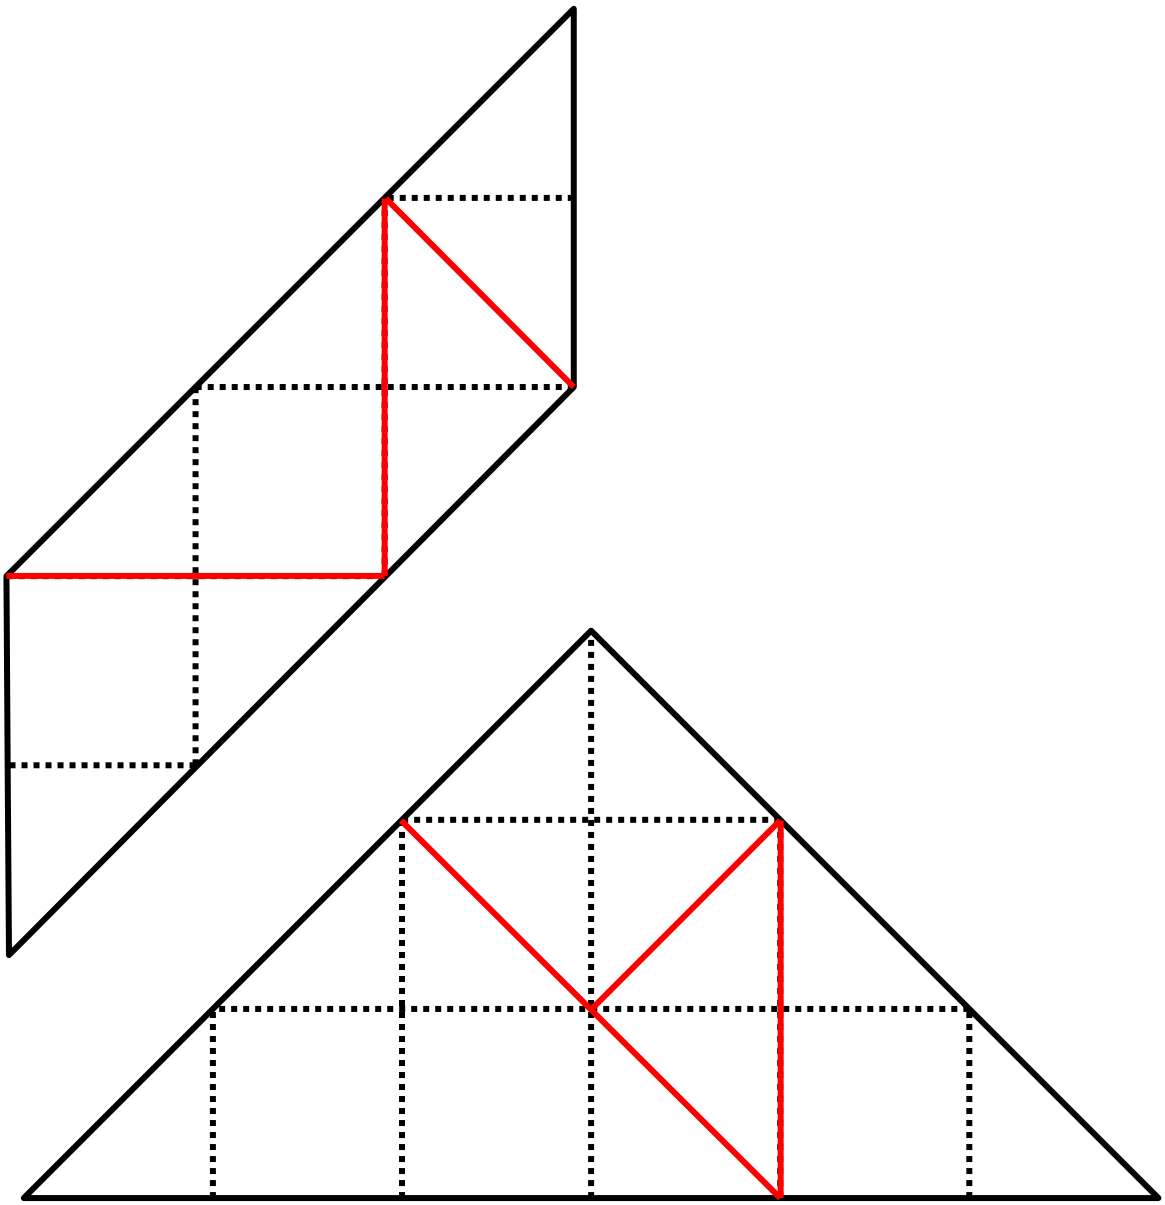




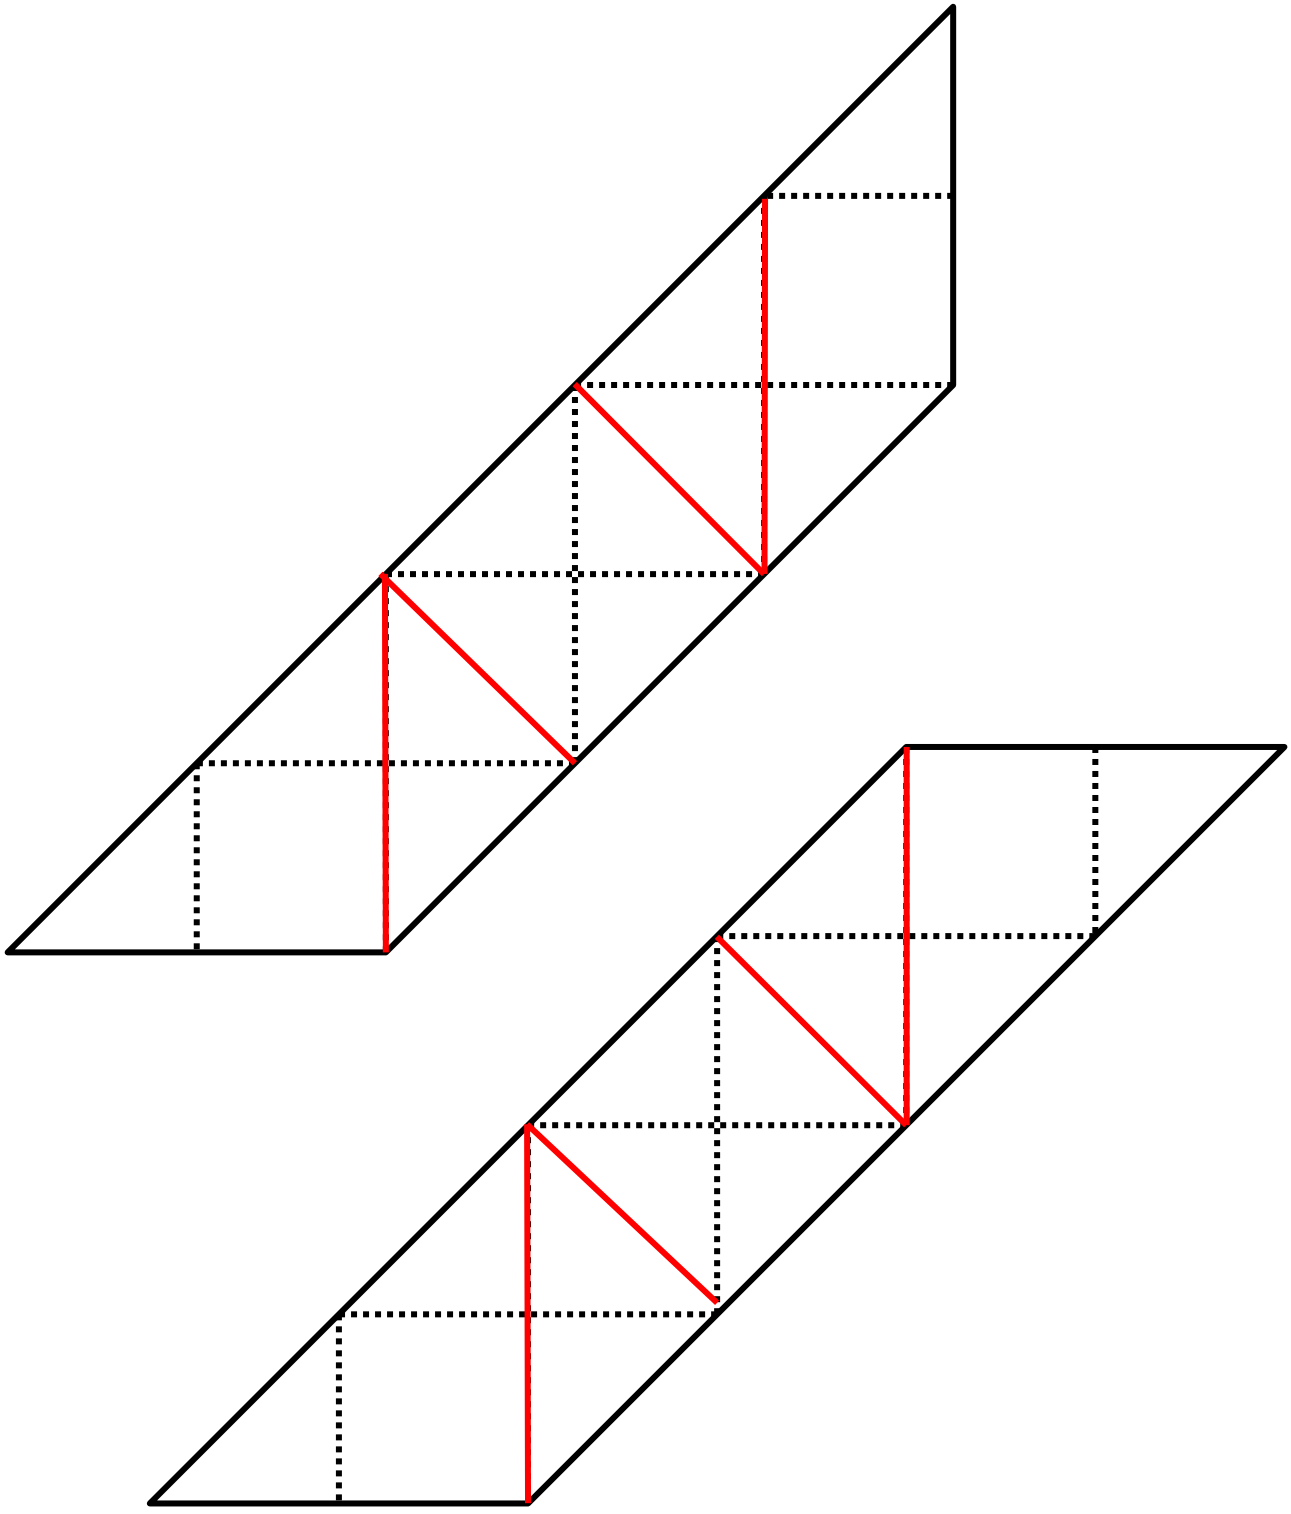
Avec quatre pièces

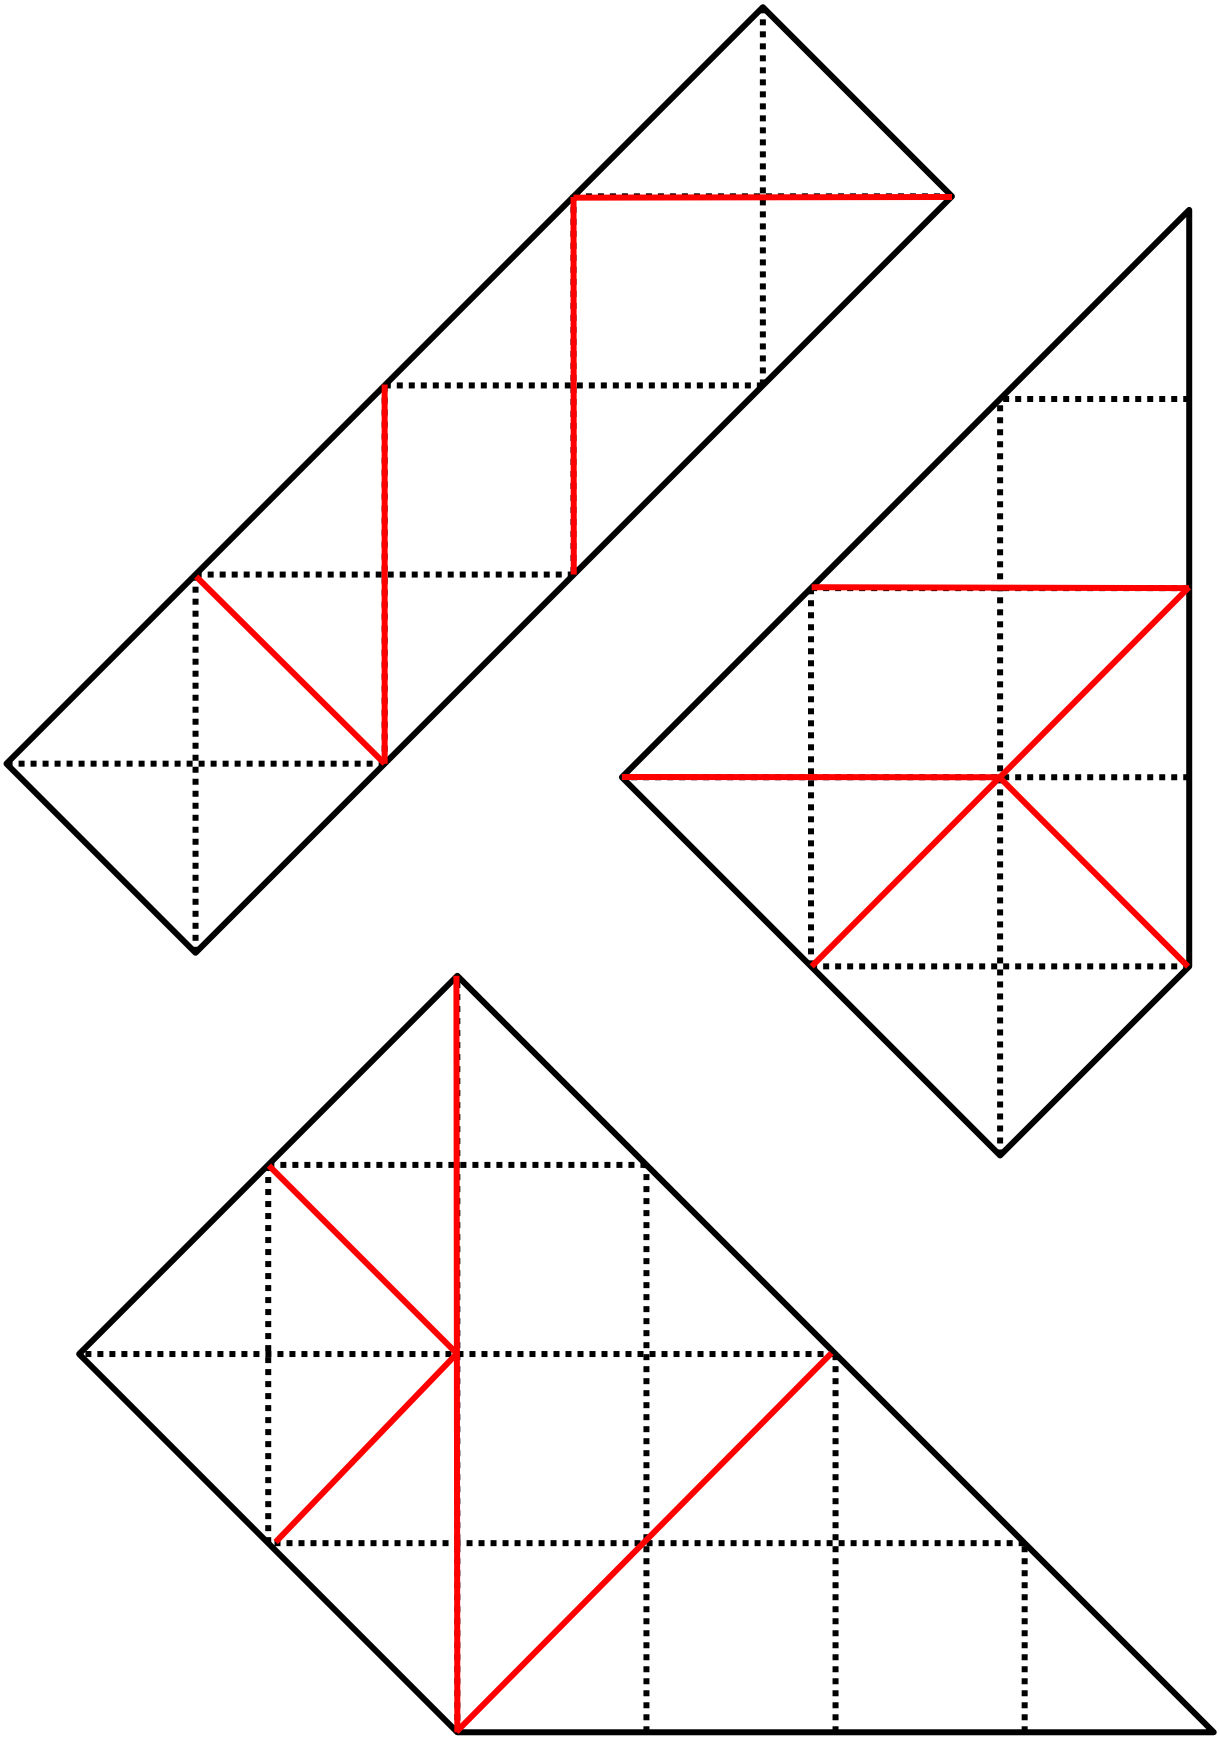


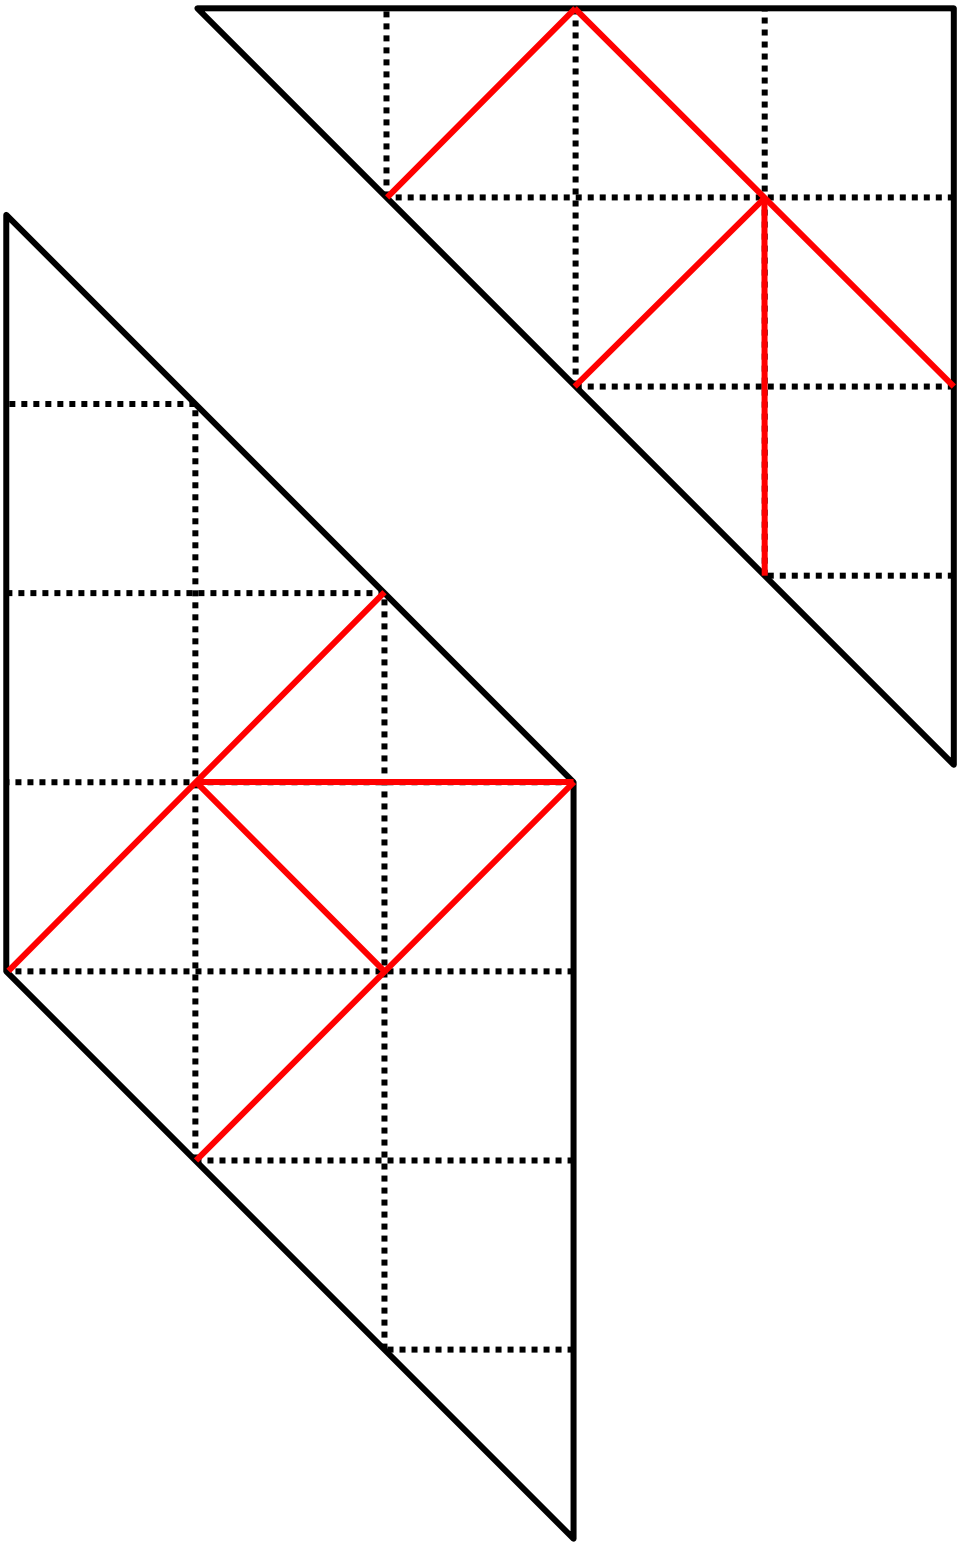


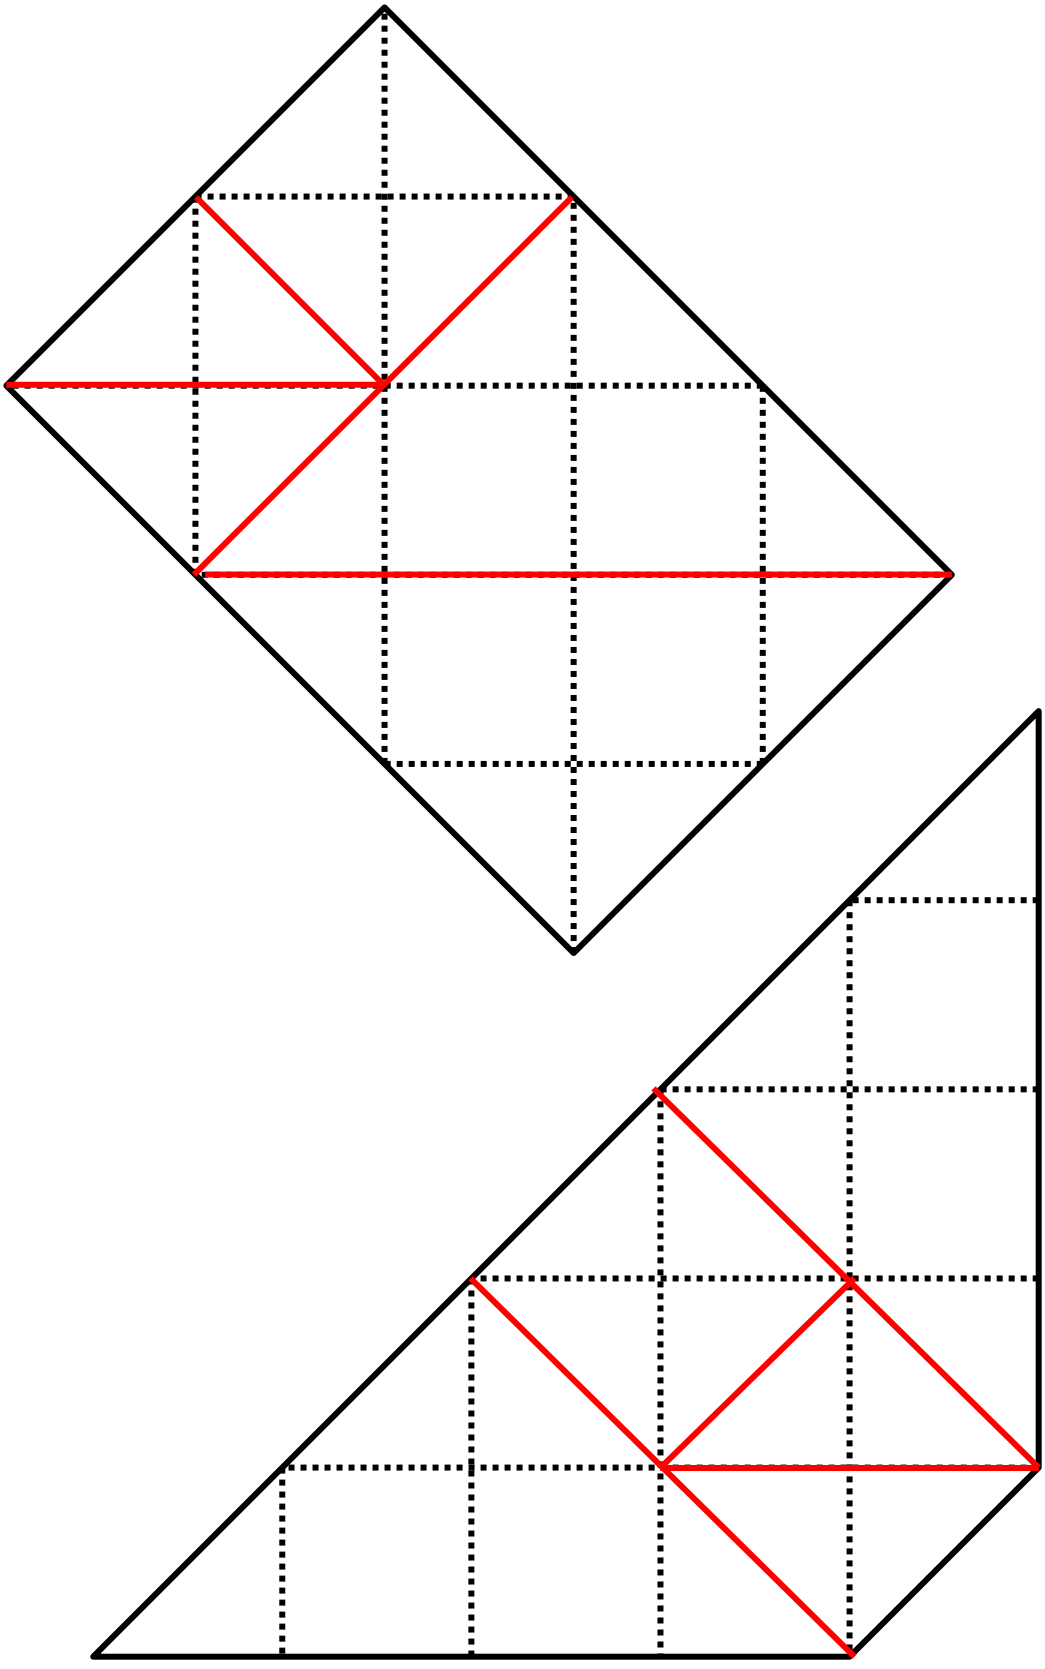


Avec cinq pièces

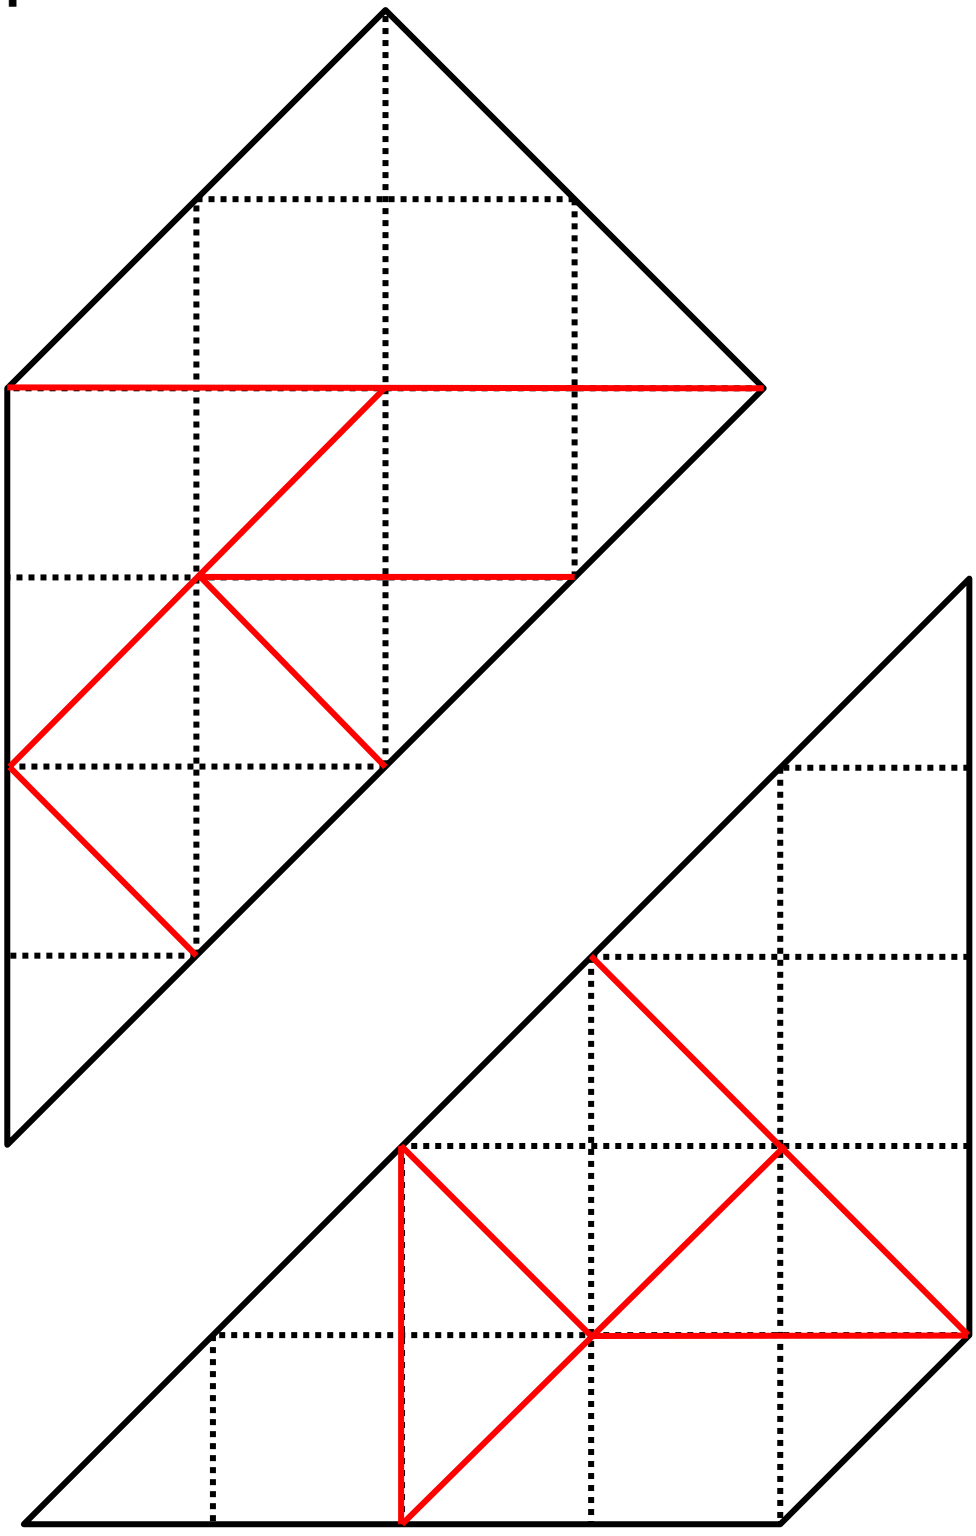


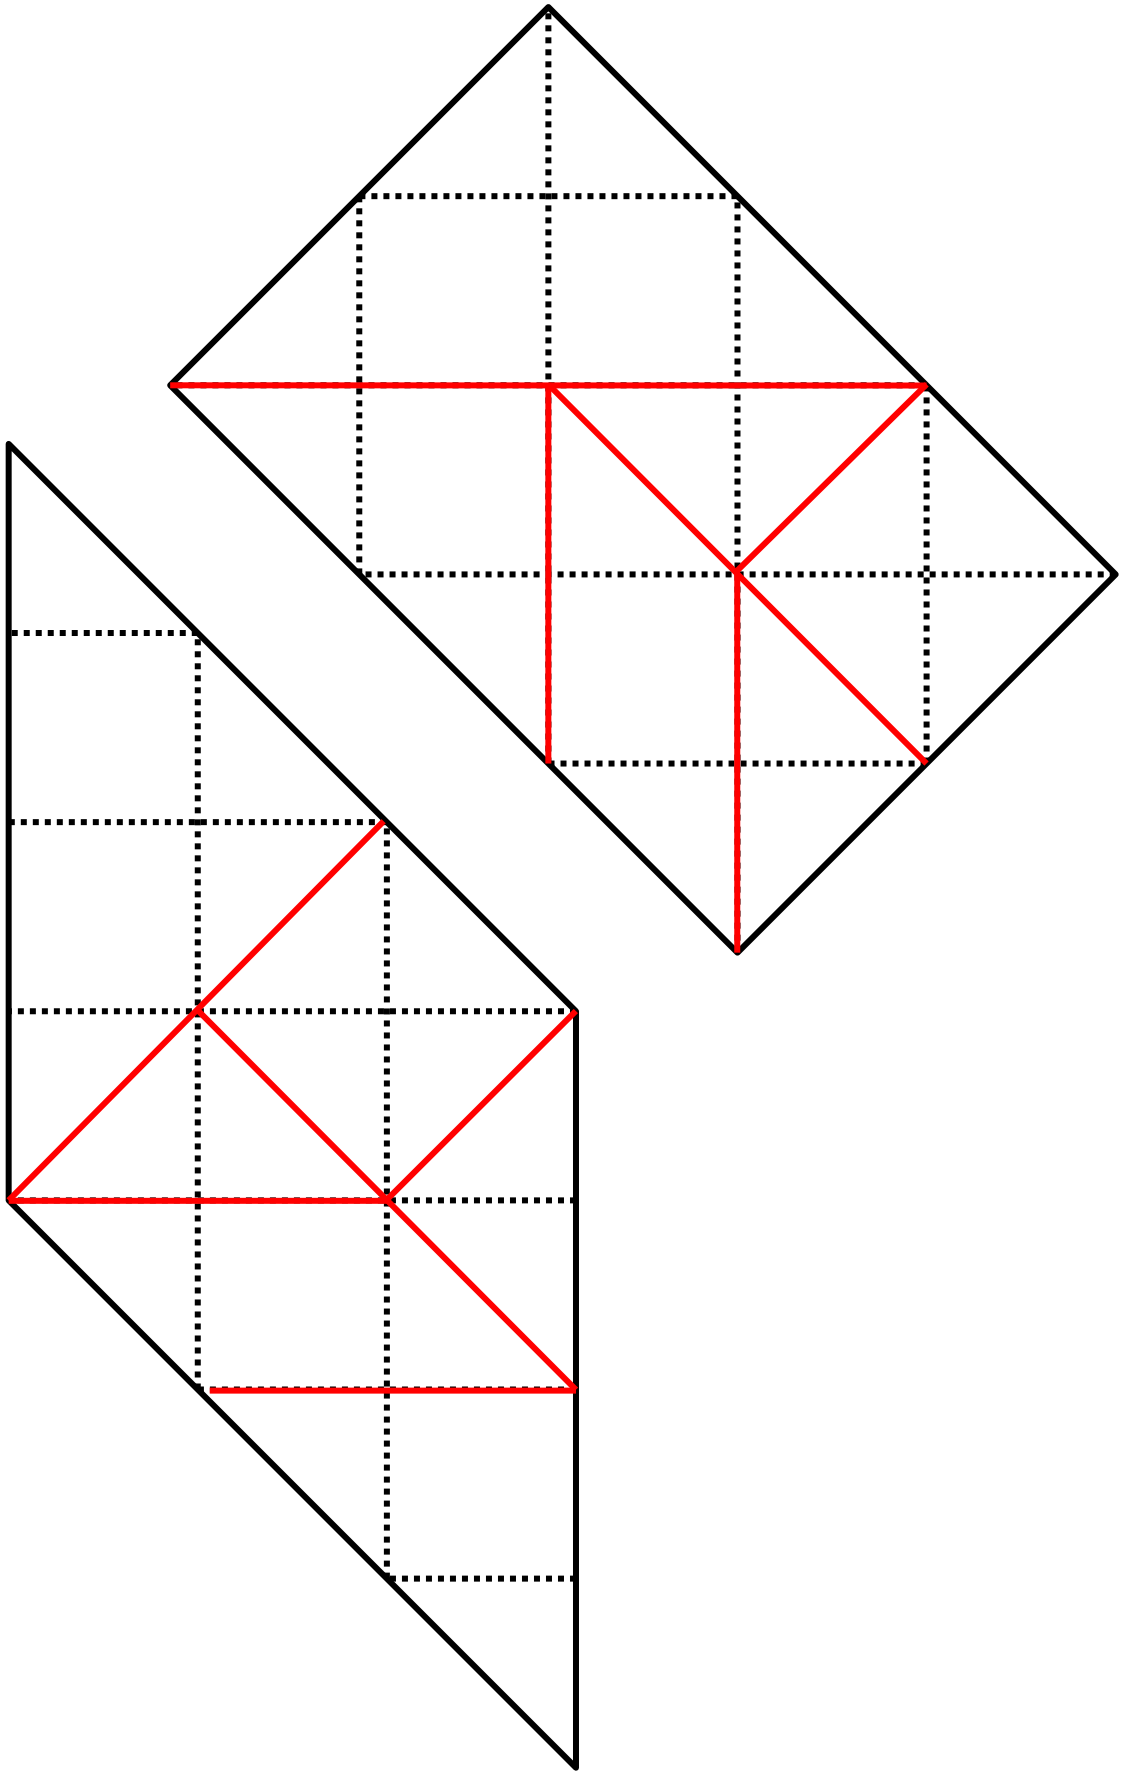


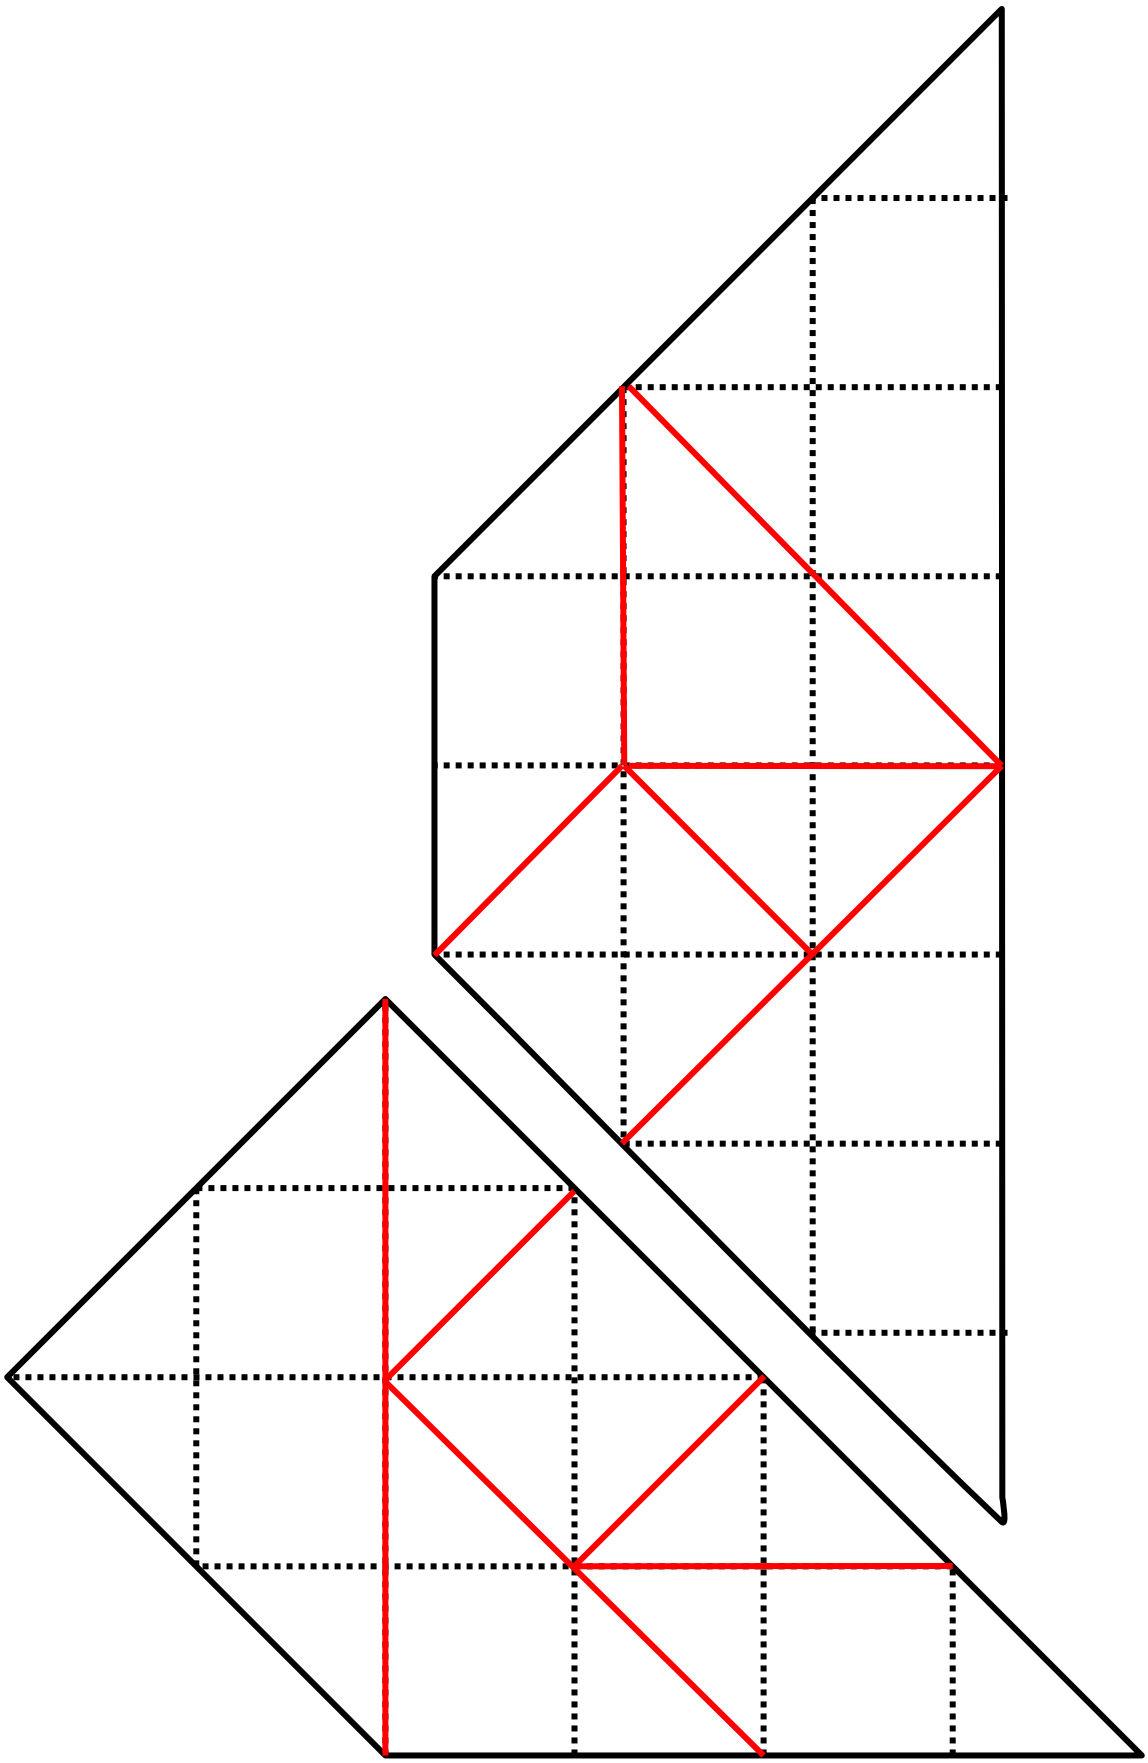


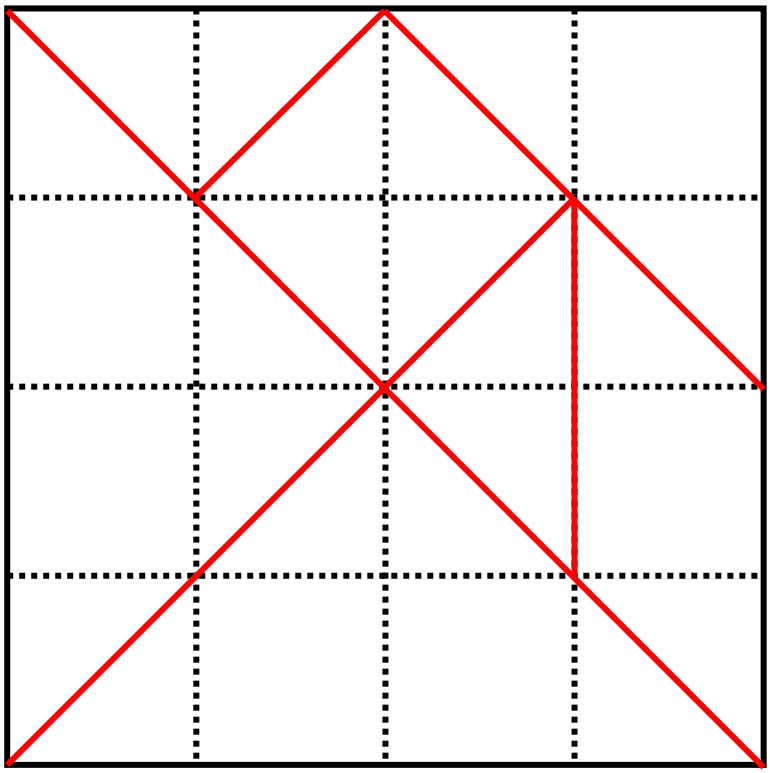


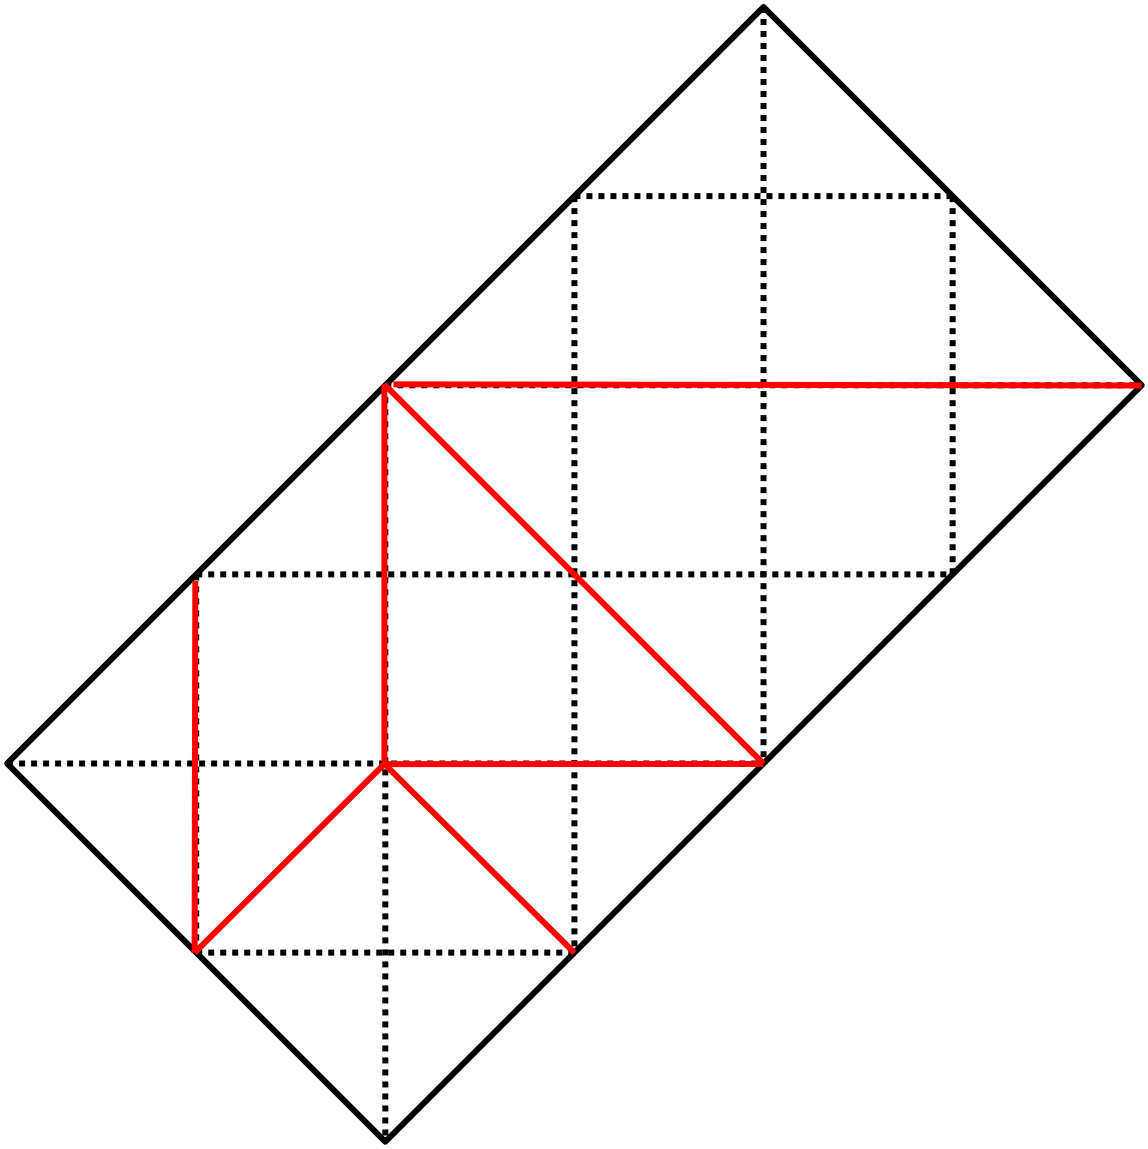
Avec six pièces

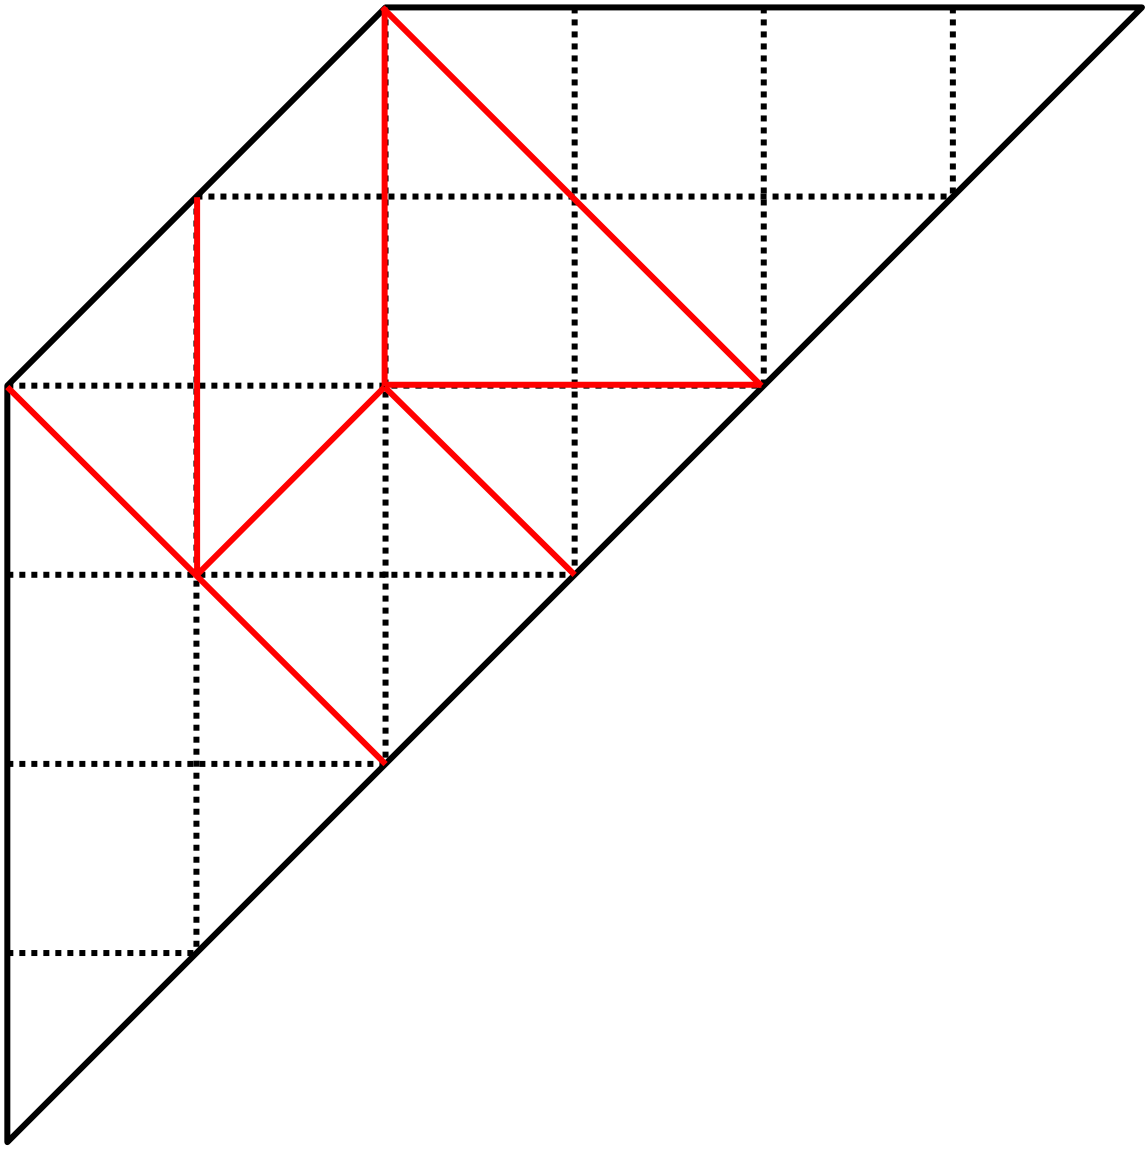


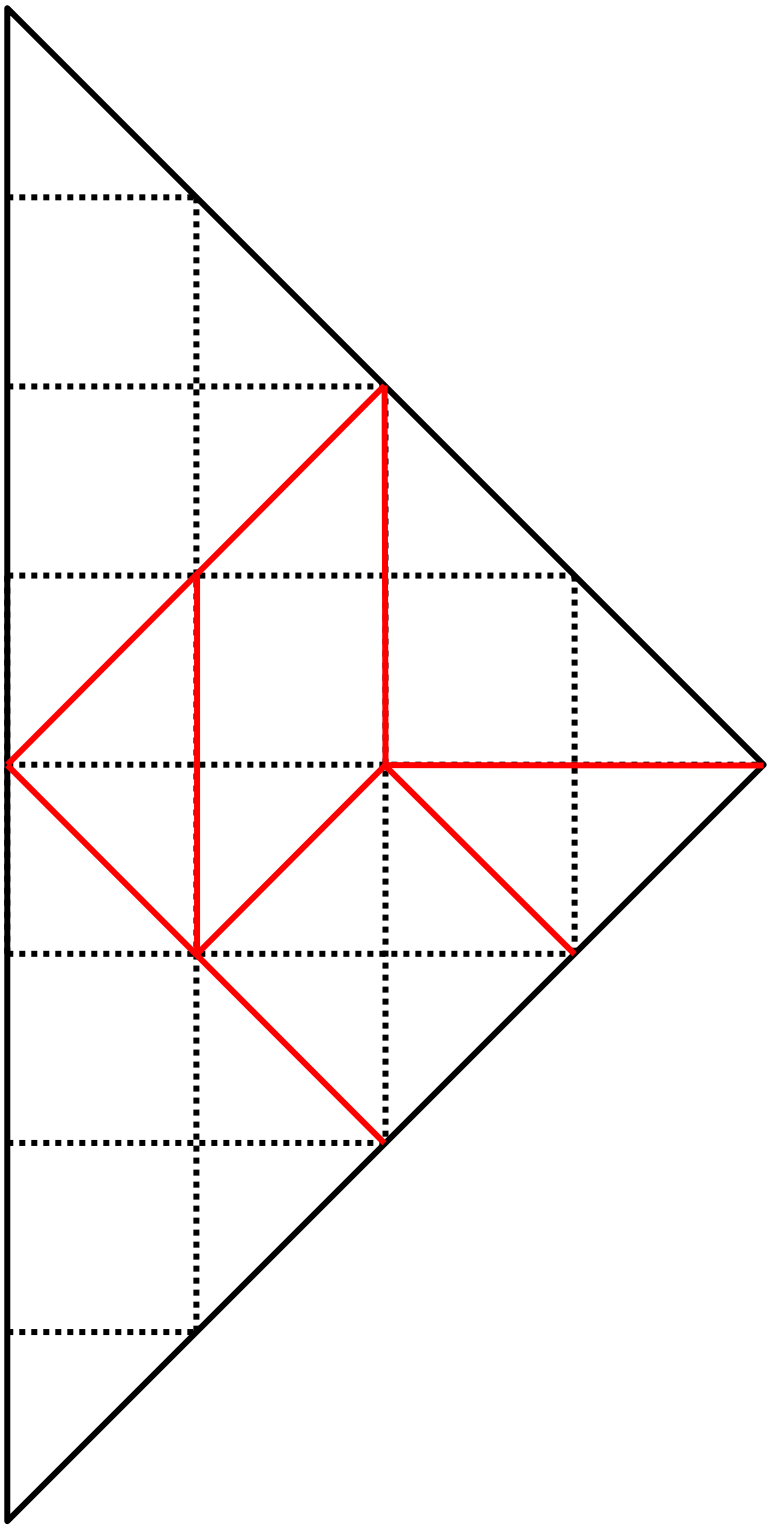


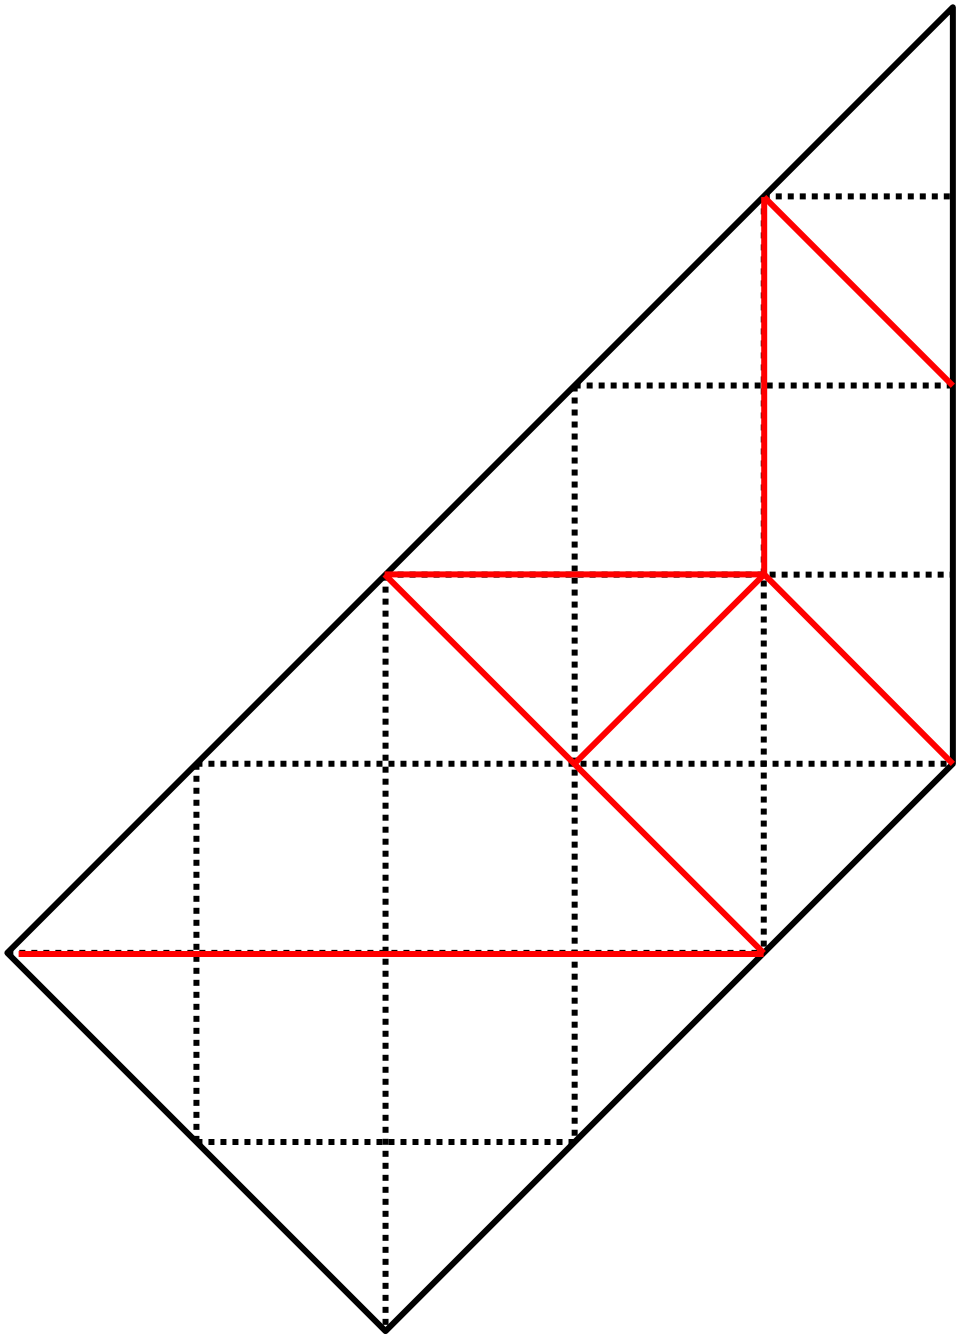


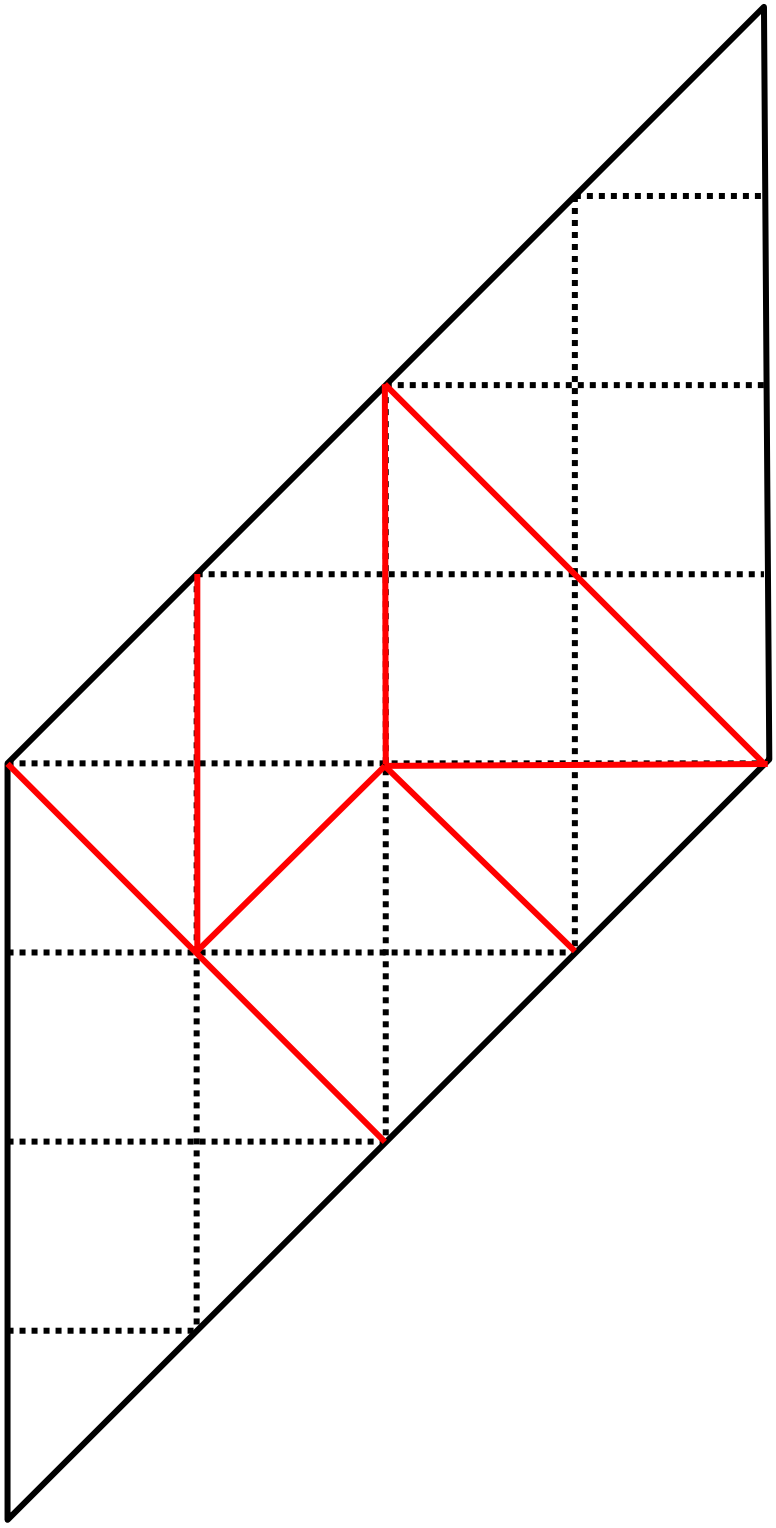


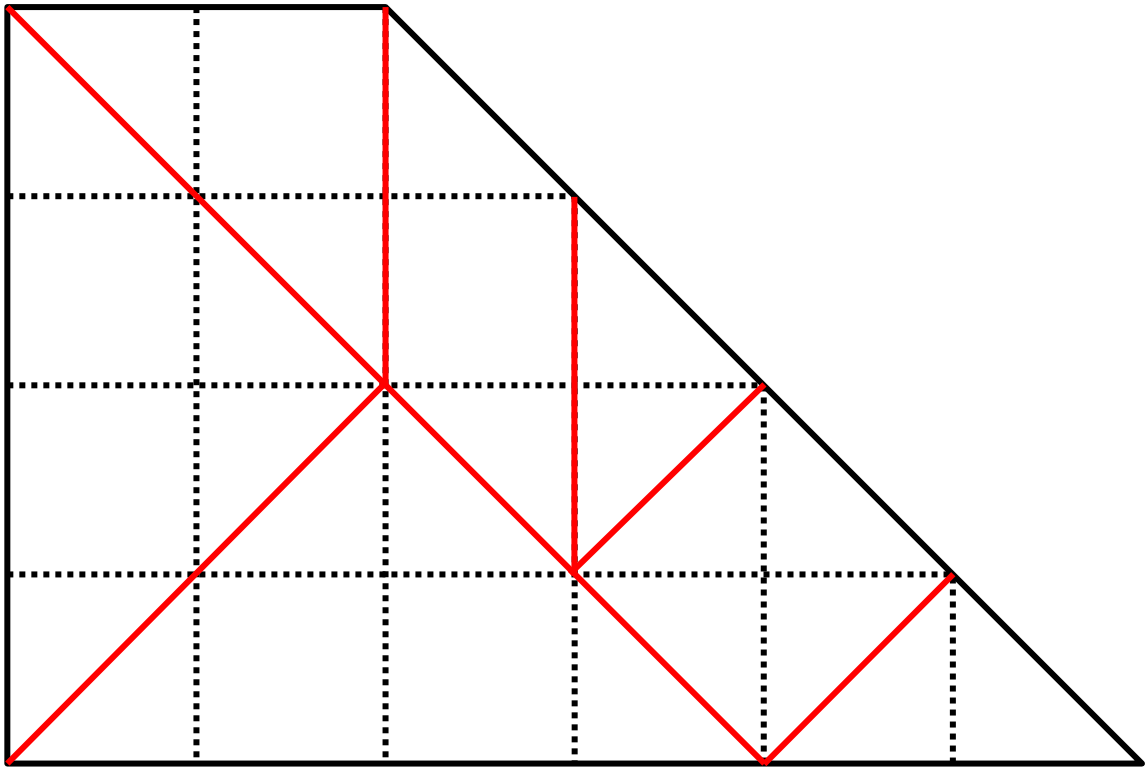












Avec sept pièces
